Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

...	not available for any reference period
...	not available for a specific reference period
...	not applicable
0	true zero or a value rounded to zero
0 ^s	value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
^p	preliminary
^r	revised
x	suppressed to meet the confidentiality requirements of the <i>Statistics Act</i>
E	use with caution
F	too unreliable to be published

Issue information

The Participation and Activity Limitation Survey (PALS) is Canada's national survey that gathers information about adults and children whose daily activities are limited by a physical, mental, or other health-related condition or problem.

This report presents a series of tables concerning help with everyday activities as well as unmet needs and help providers.

Table 1
Adults with disabilities that need help with everyday activities, by sex and age groups, Canada, 2001 and 2006.

Need help with everyday activities	2001			2006		
	Total	Males	Females	Total	Males	Females
	number					
Total - 15 years and over	2,397,960	904,050	1,493,910	2,652,890	980,850	1,672,050
Receiving help but needing more	652,660	231,810	420,860	971,190	342,380	628,810

Table 7
Main help providers, Canada, 2006

Help providers	%
Family	83.1
Friends	13.5
Organisation	13.4
Employee	10.7
Other	4.2

Note(s):

This table use 2006 data only and include Yukon, Northwest Territories and Nunavut.

Respondents can indicate up to 3 help providers.

Source: Statistics Canada, Participation and Activity Limitation Survey, 2006.

Technical notes

Derivation of variables on "help with everyday activities".

2001 and 2006: Table 1 to 5

Notice that the 2006 data regarding Yukon, Northwest Territories and Nunavut have not been included in the following tables in order to maintain the comparability between these 2 years.

The Participation and activity limitation survey (PALS) respondents had to answer a series of questions that were used to determine if they were **receiving** help to accomplish some of their everyday activities because of their health condition. Respondents also had to indicate if they **needed** help for their everyday activities.

For these series of tables, we divided people that answered **needed help** for their everyday activities into three categories. The first category represents people that are receiving help, but need more. The second regroups people that are not receiving help but need some. These 2 groups represent people with unmet needs, i.e. partially or totally. Finally, the third category includes people that are receiving all the help needed. Therefore, this last category represents those who have needs that are entirely satisfied.

In the survey, help with everyday activities included the following 9 activities:

- (1) Meal preparation;
- (2) Everyday housework (e.g. dusting and tidying up);
- (3) Heavy household chores (e.g. spring cleaning and yard work);
- (4) Appointments (getting to appointments, running errands and grocery shopping);
- (5) Looking after personal finances (e.g. making bank transactions or paying bills);
- (6) Child care;
- (7) Personal care;
- (8) Specialized nursing care;
- (9) Moving about inside the home/residence.

In order to determine how persons with a limitation have access to the help they needed, the information concerning help received and help needed have been combined into a derived variable (we used different variables than those that were used in the 2001 publication).

RNHELP has been developed by using the 2 following derived variables:

AHEA_D_REC: Comes from the questions: Do you usually receive help with...each of the everyday activities.

AHEA_D_ND: Comes from the following questions: Do you need additional help with ...each of the everyday activities.

If AHEA_D_REC = 1 (Yes) & AHEA_D_ND = 1 (Yes) then RNHELP=1;

If AHEA_D_REC = 2 (No) & AHEA_D_ND = 1 (Yes) then RNHELP=2;

If AHEA_D_REC = 1 (Yes) & AHEA_D_ND = 2 (No) then RNHELP=3.

RNHELP= 1 - Receiving help but needing more;

RNHELP= 2 - Not receiving help but needing some;

RNHELP= 3 - Receiving all help needed.

The sum of the three is then equal to the population with needs.

Part devoted only to 2006 data: Tables 6 & 7

Because the structure of questions were modified in 2006, comparison of this section with 2001 data was impossible at the analytic level. Furthermore, the 2 tables in this section included Yukon, Northwest Territories and Nunavut.

Unmet need (Table 6)

We ask respondents to choose amongst the 9 reasons proposed, indicating why they did not receive the help that they needed, for each of the everyday activities they identified.

List of possible reasons that were offered to the respondents:

- (1) You applied for home care and were turned down;
- (2) You are presently on a waiting list;
- (3) It is not covered by insurance;
- (4) It is too expensive;
- (5) You do not know where to obtain it;
- (6) Help is not available in the area;
- (7) Informal help, e.g., from family or friends, is not available;
- (8) Another reason (specify);
- (9) None selected.

Help providers

Group under 5 categories:

The respondent had to identify the person that was helping him. He could identify up to 3 help providers.

Subsequently, we asked the respondent what their relationship was with the help provider. Here are the possible relationships:

- 11 Spouse/partner of respondent
- 12 Ex-spouse/Ex-partner of respondent
- 13 Son of respondent
- 14 Daughter of respondent
- 15 Father of respondent
- 16 Mother of respondent
- 17 Brother of respondent
- 18 Sister of respondent
- 20 Grandson of respondent
- 21 Granddaughter of respondent
- 22 Grandfather of respondent
- 23 Grandmother of respondent
- 30 Son-in-law of respondent
- 31 Daughter-in-law of respondent
- 32 Father-in-law of respondent
- 33 Mother-in-law of respondent
- 34 Brother-in-law of respondent
- 35 Sister-in-law of respondent
- 40 Nephew of respondent
- 41 Niece of respondent
- 42 Uncle of respondent
- 43 Aunt of respondent
- 44 Cousin of respondent
- 70 Same sex partner of respondent
- 80 Close friend of respondent
- 81 Neighbour of respondent
- 82 Co-worker of respondent
- 83 Non-Governmental Organization (Includes clients and patients of self-employed professionals)
- 84 Paid employee/worker of respondent
- 85 Other (Do not include organizations here)
- 86 Governmental (All levels and taxes)

Subsequently, we have grouped together choices under 5 large themes or categories: Family, Friends, Organisations, Employees and Other and we created our derived variables:

Family: If Caregiver = 11 or 12 or 13 or 14 or 15 or 16 or 17 or 18 or 20 or 21 or 22 or 23 or 30 or 31 or 32 or 33 or 34 or 35 or 40 or 41 or 42 or 43 or 44 or 70, then help provider is Family;

Friends: If Caregiver = 80 or 81 or 82, then help provider is Friend;

Employee: If Caregiver = 84, then help provider is Employee;

Organisation: If Caregiver = 83 or 86, then help provider is Organisation;

Other: If Caregiver = 85, then help provider is Other;
